Grading of Research Candidates Performance

Awarding of grades to research candidates based on their performance shall be done as per the applicable ordinances and regulations for undergraduate and Post graduate programs of Engineering under the Faculty of Technology. Semester Grade Point Index (SGPI) shall be also calculated based on the ordinances and regulations applicable for engineering programs under Faculty of Technology. Approved and recognized Research Centers shall prepare Phd course work grade card after successful completion of course work and issue to candidates and one copy to University concerned section for record.

Course Code	Course Name	Credits
PhdIT101	Research Methodology	06
Indilioi	Research Methodology	

Module	Detailed content	Hrs.
I	Research Methodology and Problem Identification and Formulation: Meaning and objectives, motivation of research, types of research, research methods v/s methodology, research and scientific methods, research process and stages of research, defining and formulating the research problem, technique involved in defining a	

	problem, importance of literature review in defining a problem, role of literature review, ways to perform literature review, methods to find open problem and research problems, critical literature review, identifying gap areas from literature study, hypothesis building	
II	Research Design and Data Collection and Analysis: Need of research design, concepts related to research design, different research designs, research plan, basic principles of experimental design and setup, collection of primary data, observation methods, interview methods, collection of data through questionnaire and schedules, collection of secondary data, selection of appropriate method for data collection, case study method, guidelines for developing questionnaire, successful interview, survey v/s experiment, processing and data analysis, use of statistical packages, measure of asymmetries and other measures. Fieldwork-The Nature of Field Work, Selection and Training of Investigators, Sampling Frame and Sample Selection, Field Operation, Field Administration.	12
III	Probability Distribution and Hypothesis Testing: Sampling and probability distribution, definitions and basic concepts of hypothesis testing, procedures of hypothesis testing, flow diagram for hypothesis testing, test of hypothesis, important parametric test, hypothesis testing of mean, proportion, tests for equality of mean and variances of two population, confidence interval, z-test, and X ² test for goodness to fit, limitation of test of hypothesis.	12
IV	Analysis of Variance and Covariance: Basic principle of Analysis of Variance, ANOVA Technique, Setting up Analysis of Variance Table, short-cut method for oneway ANOVA, Coding method, Two-way ANOVA, ANOVA in Latin-square design, analysis of co-variance (ANCOVA), assumptions in ANCOVA. Academic Ethics: Plagiarism, exposure on anti-plagiarism tools.	12
V	Technical Writing and IPR: Academic writing, sources of information, assessment of quality of journals and articles, writing scientific report, structure and component of research report, types of report – technical reports and thesis, SCOPUS Index, citations, search engines beyond google, impact factor, H-Index. IPR: What is IPR?, importance of patents, types of IPR, process of patent.	12

Course Code	Course Name	Credits
PhdIT102	Course suggested by Guide	04
PhdIT103	Course organized by Research Centre	04

PhdIT102: Course suggested by Guide

This course is to be suggested by guide/supervisor in specific domain area of research undertaken by the research candidate.

Research candidates can undertake this course in consultation with guide/supervisor as per guidelines given below;

1. Relevant course shall be successfully completed at the *Ph.D research centre* which has 6 credits.

OR

Credits: 04

Credits: 04

1 MOOC course / NPTEL course / online courses from coursera, greatlearning, simplylearn etc. with the permission of guide / supervisor.

The guide is supposed to give 3 assignments based on the assigned course for internal evaluation purpose.

PhdIT103: Course organized by Research Centre

A training course will be organized by the research centre that will be based on the statistical tools and other technologies like R, Python, SPSS, MATLAB etc.

Description: This course intends to cover technological skills required for research. This knowledge will help them to implement their designed computational methods using some statistical package or programming language. They will also learn some advanced soft computing algorithms, networking architectures, cloud computing concepts, security algorithms etc. We also intend to introduce statistical concepts used to measure social and scientific phenomenon. The exercises will focus on use of statistical software packages such as R, Python, SPSS, STATA, and Social Network Analysis.

Course Code	Course Name	Credits
PhdIT104	Seminar	04

Following guidelines for credit seminar shall be followed:

- 1. The research scholar will have to present seminars on the topic to the guide.
- 2. Seminar should be based on thrust areas in specific research domain.
- 3. Research scholar should do literature survey, identify the topic for seminar and finalize the same in consultation with Guide/Supervisor.
- 4. Report should be compiled in the standard format as per University Guidelines for report writing and present in front of pair of Examiners appointed as per Vice Chancellor's Directives.

Seminar should be assessed jointly by the pair of Internal and External Examiners

Following points must be assessed during the presentation of Credit Seminar

- i. Quality of Literature survey and Novelty in the topic
- ii. Relevance to the specialization
- iii. Understanding of the topic
- iv. Quality of Written and Oral Presentation
